Civil Aviation Safety Authority

**KNOW
YOUR
DRONE**

BUSHFIRES ARE NO DRONE ZONES.

**Flying a drone near
a bushfire, without
permission, puts
lives at risk.**

Firefighting aircraft, including helicopters and aeroplanes, often fly at very low altitudes. If a drone is detected, firefighting aircraft may be grounded for the safety of pilots and emergency services on the ground. This could hamper firefighting efforts, causing further damage to property and loss of life.

In an emergency, always follow the advice of your local fire authority.

Using your drone to film a fire front, or to check how far away an active bushfire is, could hamper emergency services and break the drone safety rules.

Remember, you must also:

keep your
drone within
visual line of sight

only fly during
daylight hours

always fly below
120 metres (400 feet)

keep at least
30 metres away
from other people

fly in open spaces
away from other
people and
populous areas

keep clear of a
controlled airport

Breaking these rules can land you
in trouble. You can be taken to
court and fined.

If you see someone breaking the rules,
you can report it to CASA.
